Prepared for Ruapehu District Council

February 2009

Pg 1

INTRODUCTION

The Ruapehu District Council (RDC) has requested a proposed list of recommended council trees for listing as Heritage Trees on the District Plan Register. The trees assessed, as set out in the following report, are those listed as numbered heritage trees in public properties throughout the Ruapehu District Area.

The assessment involved:

1. Visual tree inspection for each individual tree

This inspection follows a procedure based on the Visual Tree Assessment (VTA). The purpose of the VTA inspection is to systematically assess, where applicable, both biological and mechanical parameters to determine potential tree hazards and health. The information obtained from the assessment determines the level or depth of investigation that is required for tree management and hazard evaluation for tree evaluation purposes.

For the purpose of heritage status evaluation the VTA acts as a prerequisite. Before any given tree is assessed as a heritage tree it requires to have a failure potential of 1 (low) and a hazard rating of equal to or less than 6 (low). Ratings are attributed having regard to numerous factors - Refer Appendix A for a copy of the VTA assessment Form.

2. Heritage Tree Evaluation.

Each tree as identified through the VTA as suitable for evaluation underwent a Heritage Tree Evaluation and was attributed a 'value score'. Each tree was given a value according to the rating system and the cut-off score rating was 160. Every tree identified as having scored over 160 has been recommended as 'heritage tree' status and is recorded in the following report. Individual ratings are attributed having regard to the following categories:

Form:	Based on branch architecture and balanced crown
Occurrence:	Frequency of the particular tree species within the area
Indigenous:	Recognition of significant native trees in New Zealand
Useful Life Expectancy:	Considers factors that may limit the longevity of the tree eg.soil compaction, decay, safety...
Accessibility:	Access to the tree by the public. Based on the ability of an individual who can walk without any aids. Excellent means a tree can be touched.
Presence of other trees:	Perception of the tree within a group or as an individual specimen
Visual Contribution:	Where people can visually notice the tree from a location
History or Event:	Planted as commemorative tree, or is associated with a historic event
Ecological:	Contribution of a tree within a forest fragment to the local ecosystem

3. Data recording, collating, assessment and presentation

Data was collected for each individual tree and stored electronically. This data was revised, sorted and stored. All information pertaining to the above processes is stored both electronically and in paper form and has been presented to the Council in the form of Arboricultural Assessment Report for the proposal of Heritage trees within the Ruapehu District.

4. Labelling of evaluated trees.

Each tree that was identified as heritage status and has reached a score rating of 160 or greater has been individually labelled. Plastic labels were used with laser etched writing stating council name, heritage tree and number. The labels were fastened to the tree with stainless steel screws used due to the inert nature of the material (note: screws should be backed out during biannual hazard assessments to prevent dislodgement from tree growth).

Total Score: 165

Site address:	Hakiaha Street, Taumarunui
Location of tree/s within site:	Manson Gardens opp. Century 21
Tree identification number:	002
Owners name:	Ruapehu District Council
Contact phone number:	07 895 8188
Contact address for information:	Private Bag 1001, Taumarunui 3946
Evaluation date:	Week beginning of the 27 th October 2008

Additional Information:

Tree has low priority included stem within trunk zone. Species is regarded as strong in holding. The tree would benefit significantly from formative pruning for longevity as a specimen.
